

THE FUTURE OF CUT AND BEND

Automatic Stirrup Benders can increase your production. By taking the smaller diameter bars off your cutting system you can significantly produce more tonnage. Combine cutting and bending in a single process. Increase accuracy and speed. Automatic Stirrup Bending can reduce man hours. One operator with a single Automatic Stirrup Bender can produce as much as three or four operators on a cutting system and benders. In addition to Automatic Stirrup Benders, Jaypee now offers KRB's full line of automatic benders, cutting systems and rebar pre-fabrication equipment.

This combination allows us to provide you with the expertise in selecting the right equipment for your needs and help you decide on the best machine for your job. Contact JAYPEE to find out more about the future of cut and bend.
